

# Linear regression and Correlation

Realized by:

HANNANI Mohamed  
<https://mhannani.codes/>

Supervised by:

EI OIRRAK Ahmed

# Agenda

**01**

**Introduction**

**02**

**What is correlation ?**

**03**

**Type of relationship**

**04**

**What is linear regression ?**

**05**

**Coefficient of Determination**

A full moon is visible in the upper left corner of the frame. The Milky Way galaxy stretches diagonally across the center of the image, showing a dense band of stars and cosmic dust. The foreground is dominated by the dark, silhouetted ridges of a mountain range, with some evergreen trees visible on the slopes. The overall scene is a serene and majestic view of the night sky.

# Introduction

There may be complex and unknown relationships between the variables in your dataset.

It is important to discover and quantify the degree to which variables in your dataset are dependent upon each other.

This knowledge can help you better prepare your data to meet the expectations of machine learning algorithms, such as linear regression, whose performance will degrade with the presence of these interdependencies.

**What is correlation ?**

Semantically, Correlation means **Co-together** and **Relation**.

Is a statistical technique which tells us if two variables are related.

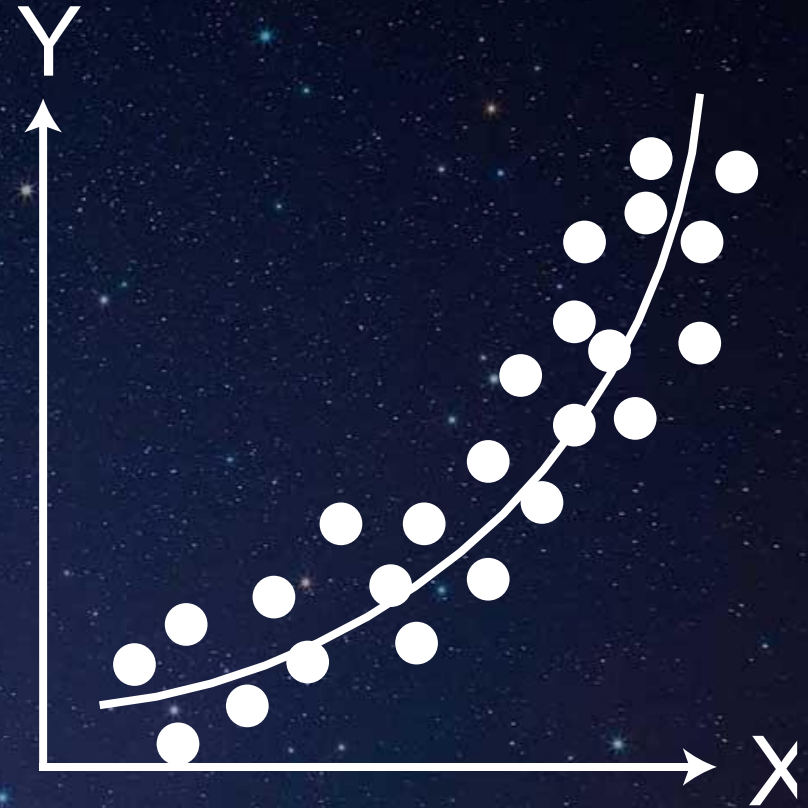

# Type of relationship

## Linear relationship

## Curvilinear relationship

## Strong relationship

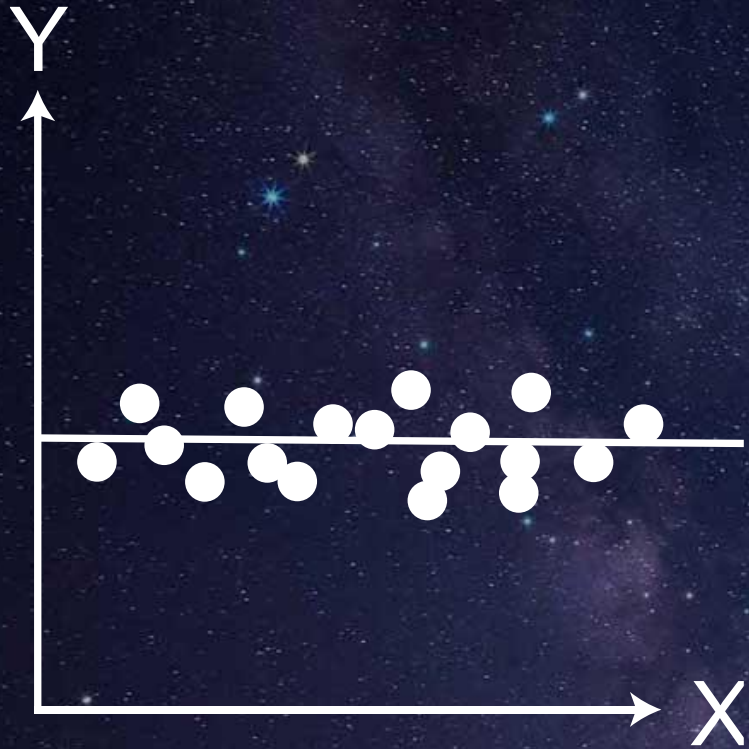

## Weak relationship

**No relationship**

**How to measure the  
correlation degree  
between two variables ?**

# PEARSON CORRELATION

Measures the degree of linear association between two interval scaled variables analysis of the relationship between two quantitative outcomes.

$$r = \frac{\sum(X - \bar{X})(Y - \bar{Y})}{\sqrt{\sum(X - \bar{X})^2 \cdot \sum(Y - \bar{Y})^2}}$$

Where,  $\bar{X}$  = mean of  $X$  variable

$\bar{Y}$  = mean of  $Y$  variable

# Assumptions

- ☐ Each observation should have a pair of values.
- ☐ Each variable should be continuous.
- ☐ Each variable should be normally distributed.
- ☐ It should be an absence of outliers.

# **SPEARMAN CORRELATION**

Measures of statistical dependence between two variables.

$$\rho = 1 - \frac{6 \sum_{i=1}^n (R(x_i) - R(y_i))^2}{n(n^2 - 1)} = 1 - \frac{6 \sum d_i^2}{n(n^2 - 1)}$$

*Where,  $R(x_i)$  = rank of  $x_i$*

*$R(y_i)$  = rank of  $y_i$*

*$n$  = number of pairs*

# Example

<b>IQ, X</b>	<b>Hours of TV per week, Y</b>
<b>106</b>	<b>7</b>
<b>86</b>	<b>0</b>
<b>100</b>	<b>27</b>
<b>101</b>	<b>50</b>
<b>99</b>	<b>28</b>
<b>103</b>	<b>29</b>
<b>97</b>	<b>20</b>
<b>113</b>	<b>12</b>
<b>112</b>	<b>6</b>
<b>110</b>	<b>17</b>

# Example

<b>IQ, X</b>	<b>Hours of TV per week, Y</b>	<b>Rank X</b>	<b>Rank Y</b>	<b>d</b>	<b>d<sup>2</sup></b>
<b>106</b>	<b>7</b>	<b>4</b>	<b>8</b>	<b>-4</b>	<b>16</b>
<b>86</b>	<b>0</b>	<b>10</b>	<b>10</b>	<b>0</b>	<b>0</b>
<b>100</b>	<b>27</b>	<b>7</b>	<b>4</b>	<b>3</b>	<b>9</b>
<b>101</b>	<b>50</b>	<b>6</b>	<b>1</b>	<b>5</b>	<b>25</b>
<b>99</b>	<b>28</b>	<b>8</b>	<b>3</b>	<b>5</b>	<b>25</b>
<b>103</b>	<b>29</b>	<b>5</b>	<b>2</b>	<b>3</b>	<b>9</b>
<b>97</b>	<b>20</b>	<b>9</b>	<b>5</b>	<b>4</b>	<b>16</b>
<b>113</b>	<b>12</b>	<b>1</b>	<b>7</b>	<b>-6</b>	<b>36</b>
<b>112</b>	<b>6</b>	<b>2</b>	<b>9</b>	<b>-7</b>	<b>49</b>
<b>110</b>	<b>17</b>	<b>3</b>	<b>6</b>	<b>-3</b>	<b>9</b>

Example

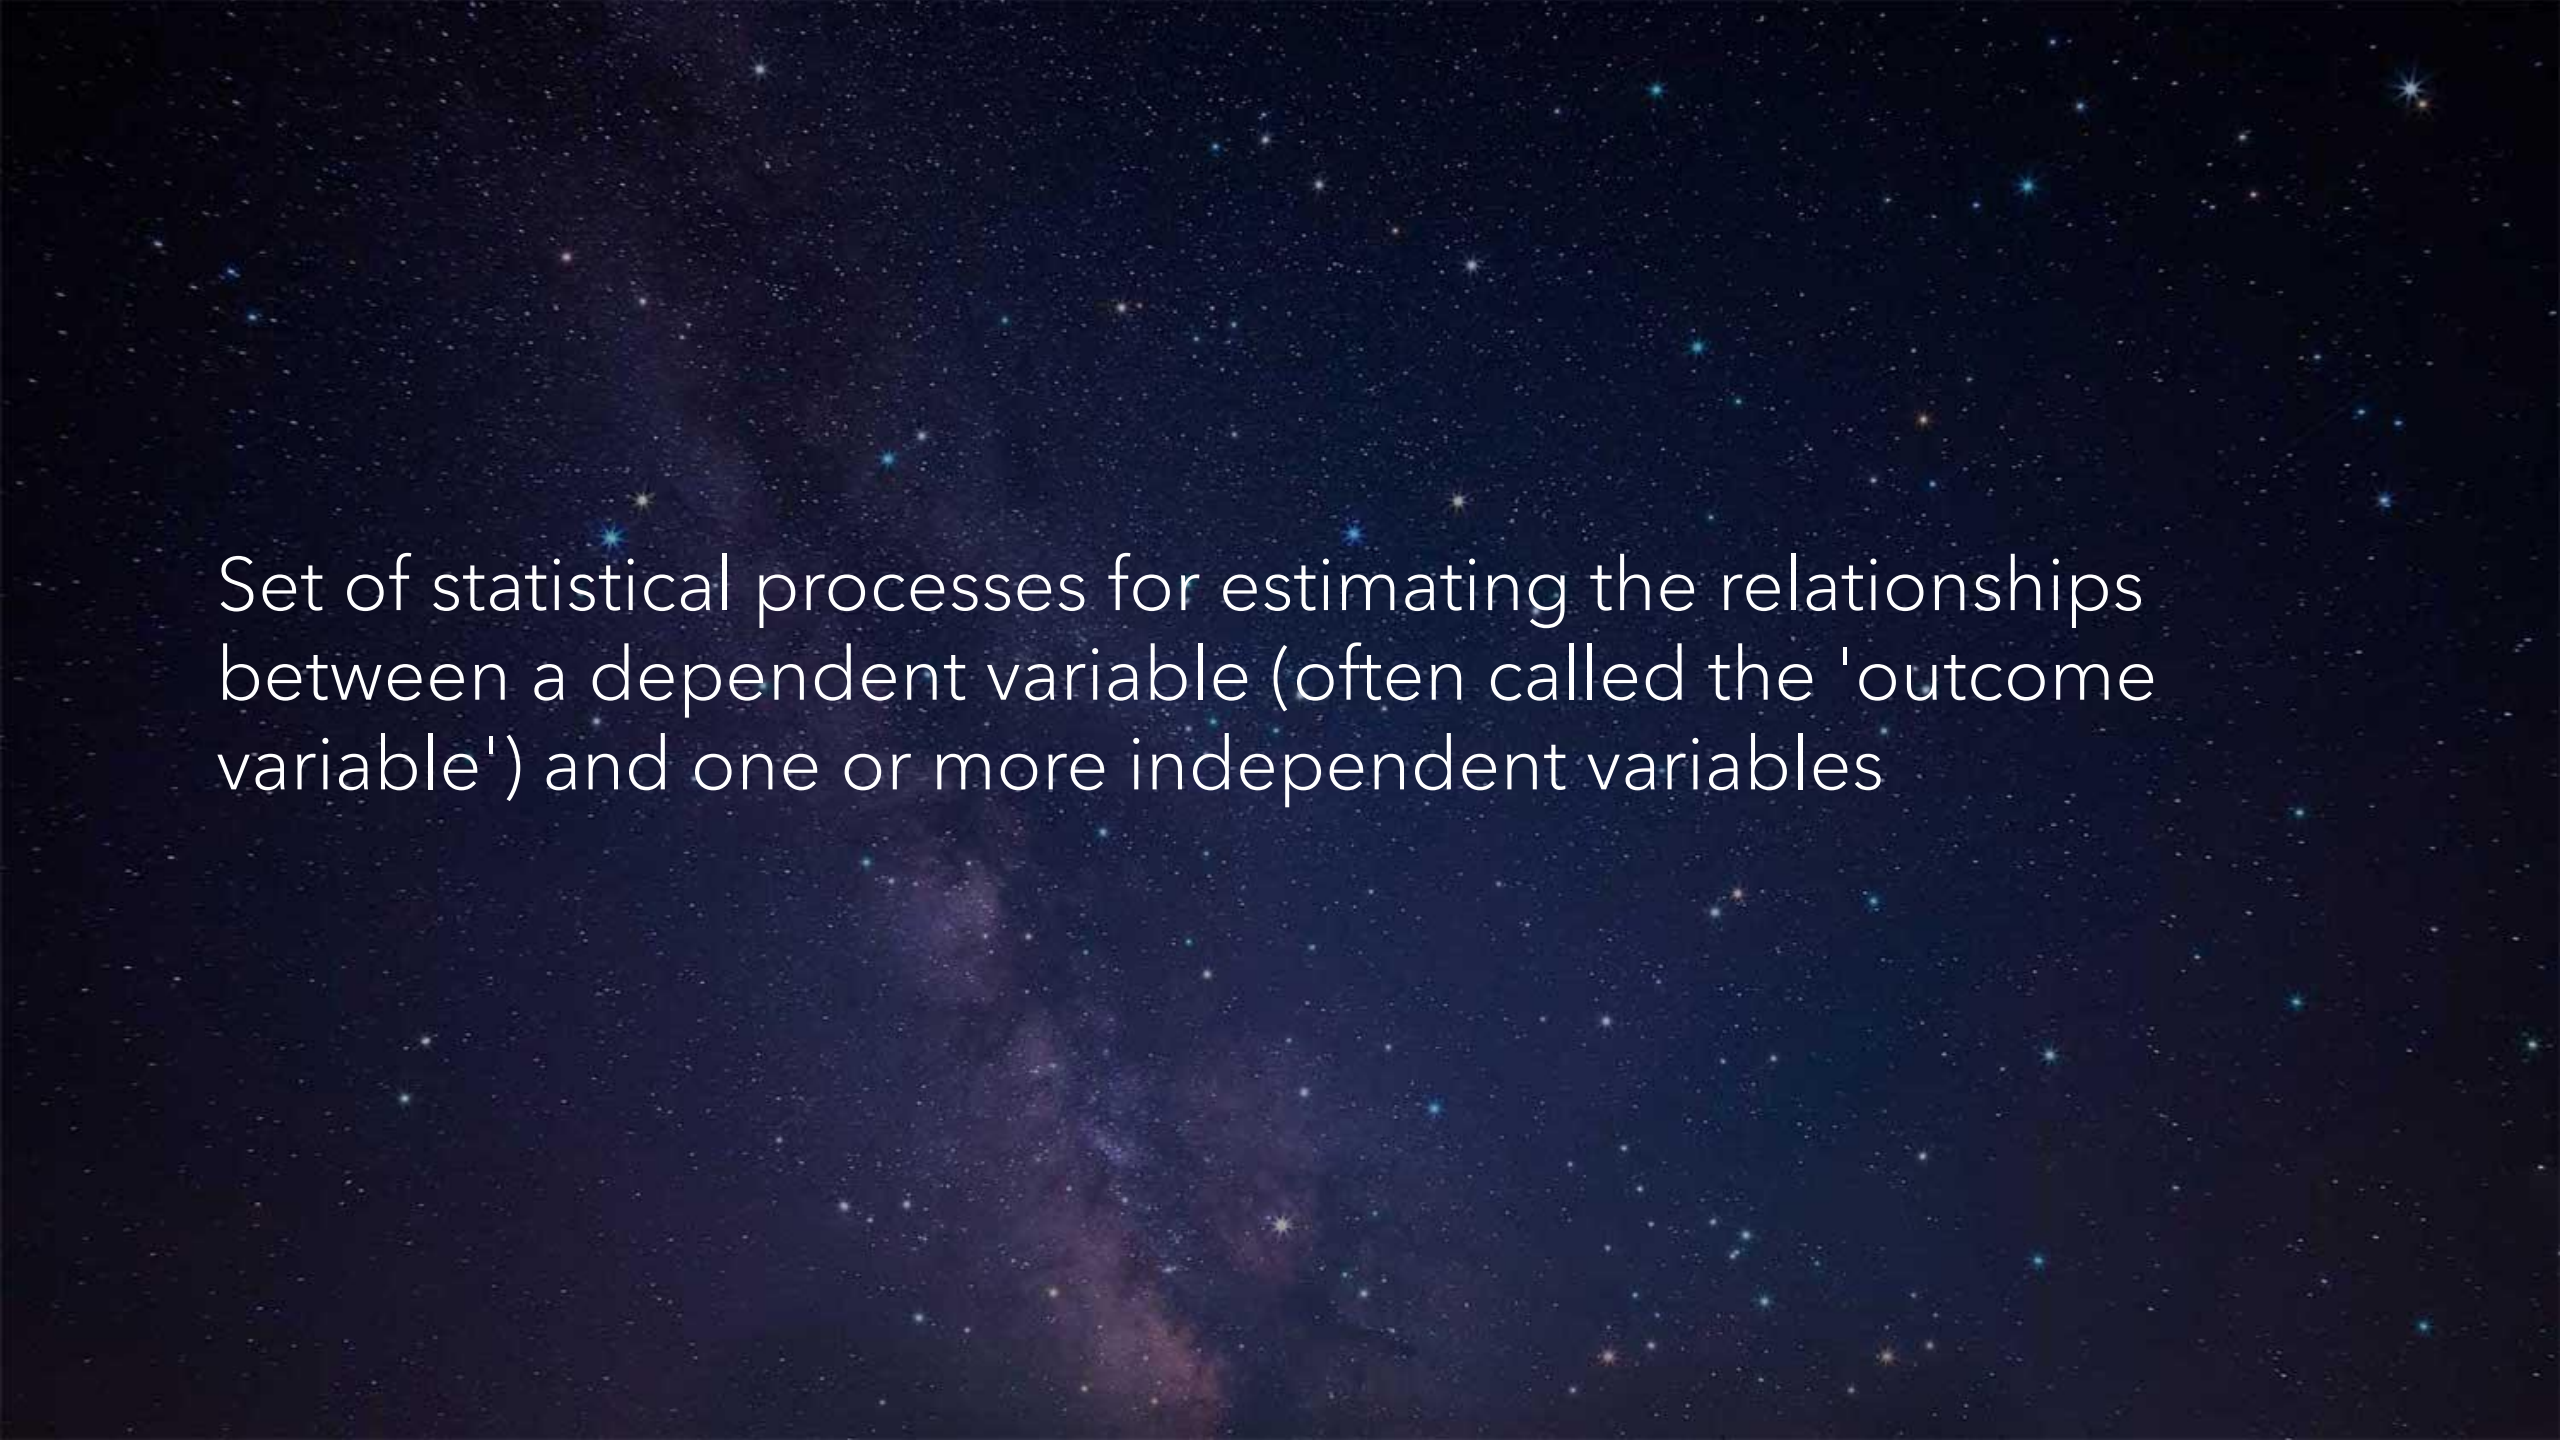

$$\rho = 1 - \frac{6 * 194}{10(10^2 - 1)}$$

$$\rho = -\frac{29}{165}$$

$$\rho = -0.175757575\dots$$

# Regression analysis

Set of statistical processes for estimating the relationships between a dependent variable (often called the 'outcome variable') and one or more independent variables

# Linear regression

Linear approach to modelling the relationship between a scalar response and one or more explanatory.

$$Y = \beta_0 + \beta_1 X_i + \epsilon_i$$

# Simple linear regression

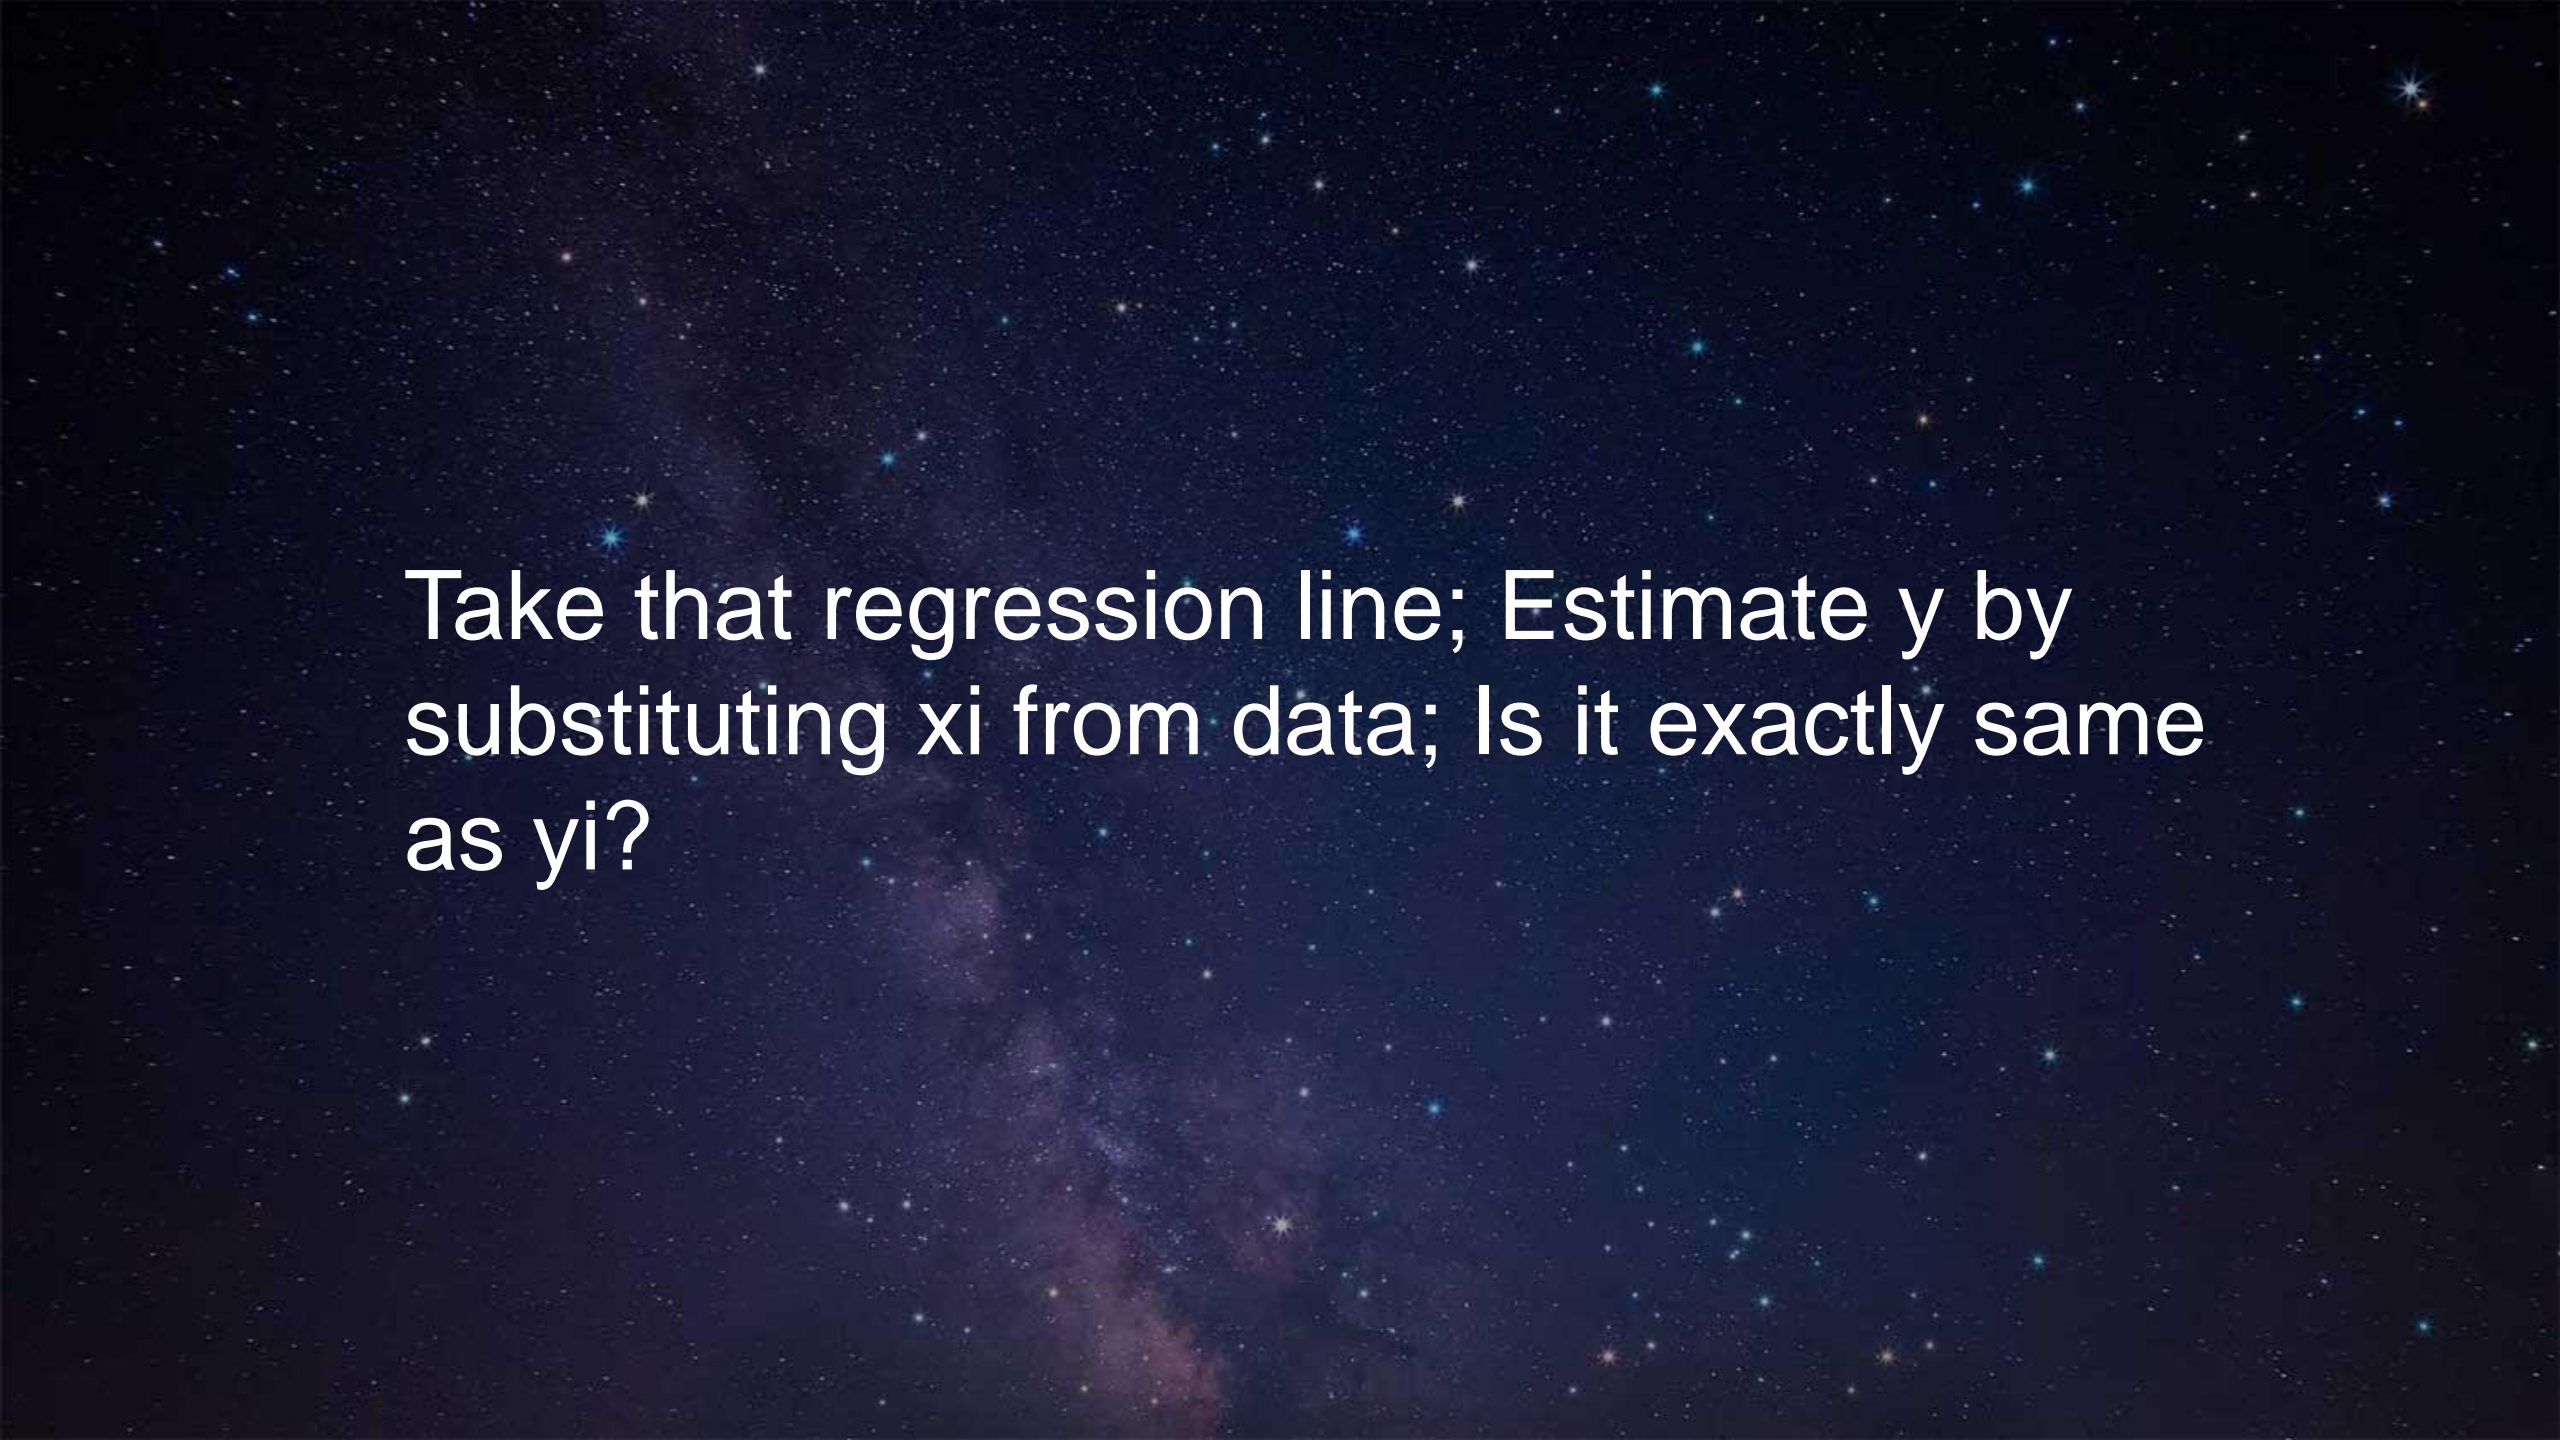

Linear regression model with a single explanatory variable.

# Assumptions

- ❑ The relationship between  $X$  and  $Y$  is linear
- ❑  $Y$  is distributed normally at each value of  $X$
- ❑ The variance of  $Y$  at every value of  $X$  is the same

Take that regression line; Estimate  $y$  by substituting  $x_i$  from data; Is it exactly same as  $y_i$ ?

# Variation About a Regression Line

The total variation about a regression line is the sum of the squares of the differences between the y-value of each ordered pair and the mean of y.

$$\textit{Total variation} = \sum (y_i - \bar{y})^2$$

A deep space photograph of a starry night sky. The Milky Way galaxy is visible as a faint, glowing band of light stretching diagonally across the frame. Numerous individual stars of varying brightness and colors (white, blue, yellow) are scattered throughout the dark blue and black background. A thin white rectangular border is centered on the slide, enclosing the text.

# Explained variation

The explained variation is the sum of the squares of the differences between each predicted y-value and the mean of y.

$$\textit{Explained variation} = \sum (\hat{y}_i - \bar{y})^2$$

# Unexplained variation

The unexplained variation is the sum of the squares of the differences between the y-value of each ordered pair and each corresponding predicted y-value.

$$\textit{Unexplained variation} = \sum (y_i - \hat{y}_i)^2$$

**Total variation**

The unexplained variation is the sum of the squares of the differences between the y-value of each ordered pair and each corresponding predicted y-value.

$$\boxed{\text{SST}} = \boxed{\text{SSE}} + \boxed{\text{SSR}}$$

# SST

**Total sum of Squares**

Quantifies how much the data points,  $y_i$ , vary around their mean,  $\bar{y}$ .

# SSE

**Sum of Squares Error**

Quantifies how much the data points,  $y_i$ , vary around the estimated regression line,  $\hat{y}_i$ .

# SSR

**Sum of Squares Regression**

Quantifies how far the estimated sloped regression line,  $\hat{y}_i$ , is from the horizontal "no relationship line," the sample mean or  $\bar{y}$ .

# Coefficient of Determination

The coefficient of determination  $R^2$  is the ratio of the explained variation to the total variation.

The coefficient of determination is also called R-squared.

$$R^2 = \frac{\textit{Explained variation}}{\textit{Total variation}}$$
